

Australian Bureau of Statistics

1216.0 - Australian Standard Geographical Classification (ASGC), 1999

Previous ISSUE Released at 11:30 AM (CANBERRA TIME) 30/09/1999

Summary

About this Release

PURPOSE OF THE ASGC

The main purpose of the ASGC is for collecting and disseminating geographically classified statistics. These are statistics with a 'where' dimension. The ASGC provides a common framework of statistical geography which enables the production of statistics that are comparable and can be spatially integrated. In practice, statistical units such as households and businesses are first assigned to a geographical area in one of the ASGC structures. Data collected from these statistical units are then compiled into ASGC defined geographic aggregations which, subject to confidentiality restrictions, are then available for publication.

The purposes of this publication are to outline the 1999 ASGC structures, describe the codes and names of geographical areas used and depict the statistical relationship between different types of geography used in the classification. It provides details of the statistical geographical areas effective 1 July 1999.

ENQUIRIES

For access to historic 1999 ASGC structure text files or historic digital boundaries please contact the ABS via email <geography@abs.gov.au>.

For more information on statistical geography please view the ABS Geography web portal on <http://www.abs.gov.au/geography>.

Purpose of the ASGC

[Contents >> Chapter 1. Introduction >> Purpose of the ASGC](#)

The main purpose of the ASGC is for collecting and disseminating geographically classified statistics. These are statistics with a 'where' dimension.

The ASGC is a hierarchical classification system consisting of six interrelated classification structures. The ASGC provides a common framework of statistical geography and thereby enables the production of statistics which are comparable and can be spatially integrated.

In practice, statistical units such as households and businesses are first classified or assigned to a geographical area in one of the six ASGC structures. Data collected from these statistical units are then compiled into ASGC defined geographic aggregations which, subject to confidentiality restrictions, are then available for publication.

The purposes of this publication are to outline the ASGC structures, describe the codes and names of geographical areas used and depict the statistical relationship between different types of geography used in the classification.

[Previous Page](#)

[Next Page](#)

Classification structures

[Contents >> Chapter 1. Introduction >> Classification structures](#)

The six interrelated classification structures of the ASGC are:

- Main Structure;
- Local Government Area Structure;
- Statistical District Structure;
- Statistical Region Structure;
- Urban Centre/Locality Structure; and

- Section of State Structure.

Each of these structures serves a specific purpose and is individually discussed in chapters 2-7.

In Census of Population and Housing years (e.g. 1986, 1991, 1996), all six structures of the ASGC are defined. In intercensal years, only the first four structures are defined.

The Main Structure, the Statistical Region Structure and the Section of State Structure cover the whole of Australia without gaps or overlaps. The other structures cover only part of Australia. These structures are hierarchical, with different structures having different numbers of levels (see table 1). Each hierarchical level is made up of one type of geographical spatial unit. The spatial units at each higher level are aggregations of the spatial units at the previous lower level.

[Previous Page](#)

[Next Page](#)

Spatial units

[Contents >> Chapter 1. Introduction >> Spatial units](#)

The various geographical areas, or spatial units, which build the different classification structures are as follows:

- Census Collection District (CD);
- Statistical Local Area (SLA);
- Statistical Subdivision (SSD);
- Statistical Division (SD);
- State and Territory (S/T);
- Statistical District (S Dist);
- Local Government Area (LGA);
- Statistical Region Sector (SRS);
- Statistical Region (SR);
- Major Statistical Region (MSR);
- Urban Centre/Locality (UC/L); and
- Section(s) of State (SOS).

During Population Census years, the smallest spatial unit is the CD. It is the basic building

block of the six classification structures. Between censuses, the smallest spatial unit is the SLA. Thus for those years when a census is held, all the above spatial units are defined. In intercensal years, all units except CDs, UC/Ls and SOS are defined.

These spatial units are individually explained in chapters 2–7.

Summary tables

[Contents >> Chapter 1. Introduction >> Summary tables](#)

Table 1 summarises the various ASGC structures and their component spatial units.

Table 2 summarises the number of ASGC spatial units in the various ASGC structures as at 1 July 1999.

1. SUMMARY OF ASGC STRUCTURES

ASGC Structure	Hierarchical levels	Component spatial units	Covers whole of Australia?
Main	5	CD, SLA, SSD, SD, S/T	Yes
Statistical District	4	CD, SLA, SSD, S Dist	No
Local	4	CD, SLA, LGA, S/T (a)	No
Government Area			
Statistical Region	6	CD, SLA, SRS, SR, MSR, S/T	Yes
Urban Centre/ Locality	2	CD, UC/L	No
Section of State	3	CD, SOS, S/T	Yes

(a) Only that part of the S/T which comes under the responsibility of an incorporated Local Government Council or selected Community Government Councils (see chapter 3).

2. SUMMARY OF ASGC SPATIAL UNITS AS AT 1 JULY 1999

Spatial units	NSW	Vic.	Qld	SA	WA	Tas.	NT	ACT	Other Territories	Australia
S/T	1	1	1	1	1	1	1	1	1	9
SD	13	12	12	8	10	5	3	2	1	66

SSD	43	45	30	21	26	9	11	8	1	194
SLA	189	200	449	125	151	44	63	107	3	1 331
LGA	177	78	125	68	142	29	8	—	—	627
S Dist	4	6	8	—	—	2	—	1	—	21

(c) Areas covered by UC/L only.

Principles of the ASGC

[Contents](#) >> [Chapter 1. Introduction](#) >> [Principles of the ASGC](#)

The ASGC is constructed on the principle that it must fulfil user needs for spatial statistics while also conforming to general classification principles.

Classification principles

The ASGC is constructed on the basic classification principles that members within one class are of the same type, classes are uniquely defined so as to be mutually exclusive and, in total, the members in each class cover the entire class.

As a result, the geographical units of each hierarchical level in each classification structure of the ASGC are:

- of the same type, delimited by well-defined criteria;
- clearly demarcated by precise boundaries;
- uniquely identified by codes and names;
- mutually exclusive;

and in aggregate cover the whole area to which that hierarchy applies.

User needs

The ASGC is designed to meet user needs for social, demographic and economic statistics. The smallest units of the ASGC i.e. CDs at census times and SLAs at intercensal times, have been designed such that they are:

- convenient and efficient for data collection;
- useful and reliable for data dissemination;
- flexible for aggregation to larger units; and
- useful building blocks for user-defined regions.

Thus, CDs are designed for efficient data collection at census times. Each CD covers an area which allows census data to be collected in an efficient and cost effective manner. SLAs are defined on the administrative areas of local governments. Local governments are both a useful source of data and a reliable dissemination unit for users.

CDs aggregate to SLAs which in turn aggregate to other larger areas of the ASGC. Each of

these geographical areas serves a specific purpose and meets user needs. Many organisations employ the CDs and the SLAs as the building blocks to construct their own geography for statistical purposes.

[Next Page](#)

Definition of Australia

[Contents >> Chapter 1. Introduction >> Definition of Australia](#)

For ASGC purposes, the ABS uses the definition of Australia as set out in section 17(a) of the **Acts Interpretation Act 1901** which currently defines Australia or the Commonwealth as meaning:

"...the Commonwealth of Australia and, when used in a geographical sense, includes the Territory of Christmas Island and the Territory of Cocos (Keeling) Islands, but does not include any other external Territory."

Following the incorporation of the Territories of Christmas Island and Cocos (Keeling) Islands into Geographic Australia (by the **Territories Law Reform Act, No. 104, 1992**, which amended the **Acts Interpretation Act 1901**), these two territories were included in the ASGC from 1 July 1993. Other external territories (such as Norfolk Island) remain excluded. In addition, the treatment of Jervis Bay Territory in the ASGC changed from 1 July 1993.

Jervis Bay Territory was previously included with the Australian Capital Territory for statistical purposes because of its administrative association with the Australian Capital Territory and because its relatively small size prevented it from meeting confidentiality requirements for statistical output. Following the granting of self-government to the Australian Capital Territory in May 1989, the situation was reviewed and from the 1 July 1993 Edition of the ASGC, Jervis Bay Territory, along with the Territory of Christmas Island and the Territory of Cocos (Keeling) Islands, formed part of a new category, Other Territories, at the State/Territory level. Although included as part of the ASGC, all three of these territories are currently regarded as out-of-scope for ABS censuses and surveys except for the Census of Population and Housing, population estimates, and Cause of Death.

This section contains the following subsection :
Purpose and structure
The spatial units

[Previous Page](#)

[Next Page](#)

Purpose and structure

[Contents >> Chapter 2. Main Structure >> Purpose and structure](#)

Purpose

The Main Structure of the ASGC is used to collect and disseminate a broad range of ABS social, demographic and economic statistics. Although the Main Structure is the most widely used and has broad application, the other structures are equally important to their own purposes.

Maps depicting the Main Structure boundaries are provided in [chapter 13](#).

The structure

The Main Structure has five hierarchical levels at Population Census times, comprising in ascending order:

CDs - SLAs - SSDs - SDs - S/Ts.

In non-census years, CDs are undefined and the Main Structure thus has only four levels of hierarchy.

In this structure, CDs aggregate to form SLAs, SLAs aggregate to form SSDs and this aggregation principle continues up the remaining hierarchical levels. At each hierarchical level, the component spatial units (e.g. SLAs) collectively cover all of Australia (as defined in [chapter 1](#)) without gaps or overlaps.

Tables

Details of the Main Structure are shown in the following tables in [chapter 12](#), The Classification Structures.

Broad Main Structure (showing three hierarchical levels: S/T - SD - SSD)
Example: Broad Main Structure

S/T	SD	SSD
1		NEW SOUTH WALES
	10	Hunter
		05 Newcastle
		10 Hunter SD Bal

Detailed Main Structure (showing four hierarchical levels: S/T - SD - SSD - SLA)

Example: Detailed Main Structure

S/T	SD	SSD	SLA
1			NEW SOUTH WALES
	10		Hunter
		05	Newcastle
			1720 Cessnock (C)
			4650 Lake Macquarie (C)
	10		Hunter SD Bal
			2700 Dungog (A)
			3050 Gloucester (A)

The spatial units

[Contents >> Chapter 2. Main Structure >> The spatial units](#)

This section contains the following subsection :

Census Collection District (CD)

Statistical Local Area (SLA)

Statistical Subdivision (SSD)

Statistical Division (SD)

State and Territory (S/T)

[Previous Page](#)

[Next Page](#)

Census Collection District (CD)

[Contents >> Chapter 2. Main Structure >> The spatial units >> Census Collection District \(CD\)](#)

Census Collection Districts (CDs) are designed for use in census years for the collection and dissemination of Population Census data. In non-census years, CDs are undefined. In aggregate, CDs cover the whole of Australia (as defined in chapter 1) without gaps or overlaps.

The CD is the smallest spatial unit in the ASGC. CDs aggregate to form the larger spatial units of SLAs in the Main, Statistical Region, Statistical District and LGA Structures, SOS in the SOS Structure and Urban Centres and Localities in the UC/L Structure. Aggregation of SLAs in turn forms the remaining spatial units in the ASGC. Therefore, in census years, the CD is the common denominator which integrates all six classification structures in the ASGC (see **diagram 3, chapter 1**).

The basic concept of a CD is that it defines an area that one census collector can cover, delivering and collecting census forms, in about a ten-day period. In urban areas CDs average about 220 dwellings. In rural areas the number of dwellings per CD reduces as population densities decrease. By design, CD boundaries do not cross SLA (and thus LGA)

boundaries. Therefore, an aggregation of CDs covers the administrative area of a local government.

For the last (1996) Census, 34,500 CDs were defined throughout Australia.

Delimitation of CDs

For the 1996 Census, the following criteria were used for delimiting CDs:

- CDs should be consistent with both the collector's workload requirements and their role as a useful spatial unit and building block capable of aggregation into broader level ASGC spatial units;
- the area and population delimited by a CD boundary must not be so great that one collector cannot deliver and collect census forms within about ten days;
- the chosen CD boundaries should, if possible, be readily identifiable on the ground, be defined in terms of permanent features, follow the centre of a road or river if these features are used and should delimit CDs which conform to existing and proposed land uses. The use of major roads as CD boundaries in rural areas should be avoided where possible, i.e. to minimise splitting of identifiable rural localities;
- CDs should conform where possible to existing/gazetted suburb boundaries. CDs must not cross SLA boundaries and, as a consequence, any other ASGC spatial unit boundary;
- CDs should not be designed in such a way as to make them confidential for publication of data. Accordingly, a CD should contain, where possible, at least 100 persons at the next census. For dissemination purposes, Indigenous Community CDs will have a limit of 80 persons; and
- CDs in aggregate must cover the whole of Australia (as defined in chapter 1) without gaps or overlaps.

Special purpose CDs

Special purpose CDs are created so that special enumeration procedures can be applied. They include:

- Indigenous Community CDs;
- Defence Establishments CDs;
- Mining or Construction towns or camps CDs; and
- Major Waterways CDs.

A number of these special purpose CDs have no actual boundary. They are represented as points instead of areas on maps.

Indigenous Community CDs are defined where there is a significant Indigenous population.

Defence Establishments CDs are defined where there is a clear boundary and special enumeration procedures are required.

Mining or Construction CDs are defined when the town or camp is expected to exist for at least two censuses.

Major Waterways CDs consist of water only and contain no population. They are found particularly in major urban areas where an LGA boundary extends from the shore to include part of a body of water.

Off-shore, shipping and migratory CDs

Off-shore, shipping and migratory CDs are not spatial units in the usual sense—they have no defined boundaries. They are designed to facilitate the recording of people on census night who are off-shore on oil rigs, drilling platforms and other structures; on board vessels in and between Australian ports; or are in transit on board long distance trains, buses and aircraft.

Off-shore, shipping and migratory CDs are not defined for the Australian Capital Territory and the Other Territories.

For the 1996 Census, Australian residents temporarily in Antarctica were included in the off-shore, shipping and migratory CDs of Tasmania.

CD codes

CDs are identified by unique six-digit codes within each S/T.

Example:

160501 of New South Wales
051901 of Western Australia

The first two digits of the 1996 CD code identify the Field Management Area (FMA). FMAs closely follow federal electoral boundaries and, in most cases, are aggregates of LGAs. The next two digits identify the Field Group Area (FGA). The last two digits identify CDs within an FGA. The six-digit code must be used in conjunction with the one-digit S/T code to uniquely identify a CD.

[Previous Page](#)

[Next Page](#)

Statistical Local Area (SLA)

[Contents](#) >> [Chapter 2. Main Structure](#) >> [The spatial units](#) >> [Statistical Local Area \(SLA\)](#)

The Statistical Local Area (SLA) is a general purpose spatial unit. It is the base spatial unit used to collect and disseminate statistics other than those collected from the Population Censuses. In non-census years, the SLA is the smallest unit defined in the ASGC. In census years, an SLA consists of one or more whole CDs. In aggregate, SLAs cover the whole of Australia (as defined in chapter 1) without gaps or overlaps.

SLAs aggregate directly to form the larger spatial units of SSDs in the Main Structure, SRSs in the SR Structure and LGAs in the LGA Structure (see diagram 3, chapter 1). SSDs in turn aggregate to form the larger spatial units of S Dists in the S Dist Structure (see diagram 3,

chapter 1). Therefore, the SLA is the common denominator which integrates the four classification structures in use in both census and non-census years.

In this edition of the ASGC, there are 1,331 SLAs in Australia including one SLA for each of the three Territories of Jervis Bay, Christmas Island and Cocos (Keeling) Islands.

SLAs are listed in the table - Alphabetic List of LGAs and SLAs within States/Territories - in chapter 12.

Delimitation of SLAs

SLAs are based on the boundaries of incorporated bodies of local government where these exist. These bodies are the Local Government Councils and the geographical areas which they administer are known as Local Government Areas (LGAs). In the Northern Territory, an incorporated administrative body gazetted under the Northern Territory Local Government Act can take the form of a Community Government Council (CGC). Where there is no incorporated body of local government, SLAs are defined to cover the unincorporated areas.

The delimitation criteria for SLAs are as follows:

- An LGA is an SLA if:
 - the LGA fits entirely within an SSD; and
 - the LGA is broadly similar in size, economic significance and user needs for statistics to other LGAs in Australia.

Example:

the SLA Albury (C) corresponds to the whole LGA of Albury City in New South Wales. In the 1999 Edition of the ASGC, 479 of the total 1,331 SLAs (36%), equate with a whole LGA while approximately 76% of LGAs equate with one SLA.

- An LGA forms two or more SLAs when the two conditions above are not met. This can occur when:
 - an LGA is divided by the boundary of one or more SSDs. The LGA is split into two or more SLAs each of which falls within the relevant SSD; or
 - an LGA is substantially different in size, economic significance and user needs for statistics to other LGAs. The LGA is split into two or more SLAs which generally correspond to one or more suburbs (as occurs in the predominantly urban LGA of the City of Brisbane) or other areas of interest.

Example:

the LGA of Calliope Shire in Queensland is split into two SLAs: Calliope (S) - Pt A and Calliope (S) - Pt B because it is split by an SSD boundary. The LGA of the City of Brisbane is split into 162 SLAs generally based on suburbs.

- In the Northern Territory, an SLA can be the administrative area of a CGC

if:

- the CGC is broadly similar in size and statistical significance to the other SLAs in the Northern Territory; and
- there is a significant user need for separate statistics.

Example:

currently, only the SLA of Coomalie (CGC) is defined on this basis.

- For those parts of Australia which are not administered by incorporated local government bodies, an SLA is an unincorporated area.

Unincorporated SLAs cover the following areas:

- unincorporated on-shore area(s) and/or off-shore island(s) in an SSD;

Example:

Unincorp. Pirie is an unincorporated SLA in the Pirie SSD in South Australia;
Unincorp. Islands is an unincorporated SLA in North West SSD in Queensland.

- that part of an unincorporated area which is considered of sufficient economic significance as to warrant the formation of a separate SLA;

Example:

Petermann and Tanami in Central NT SSD in the Northern Territory

- Off-Shore Areas & Migratory SLAs, formed for census purposes for all S/Ts except the Australian Capital Territory and Other Territories to encompass off-shore, shipping and migratory CDs (off-shore, shipping and migratory CDs are explained in chapter 2);
- the entire area of the Australian Capital Territory. Each SLA is either a suburb, a locality or the non-urban area of an SSD; and
- the unincorporated part of the Northern Territory. In some SSDs (e.g. Daly, Bathurst-Melville) the entire area is covered by one unincorporated SLA. In other SSDs (e.g. East Arnhem), the unincorporated area is split into several SLAs to distinguish an economically significant town (e.g. Nhulunbuy), island (e.g. Groote Eylandt) or administrative region.

SLA name

The naming conventions for SLAs are as follows:

- An SLA which is a whole LGA adopts the name of the LGA including its LGA status as a suffix. Thus, Northam (S) and Northam (T) in Western Australia are separate SLAs. The various LGA types currently in use by States and the Northern Territory are specified in chapter 3.

Example:

Ballina (A) — New South Wales Area
Queenscliffe (B) — Borough
Liverpool (C) — City
Coomalie (CGC) — Community Government Council
Mid Murray (DC) — District Council
Roxby Downs (M) — Municipality
Murray Bridge (RC) — Rural City
Broome (S) — Shire
Roma (T) — Town

- An SLA which is part of an LGA may adopt a hyphenated name the first part of which is the name of the LGA.

Example:

the LGA of Stirling (C) in Western Australia is split into three SLAs:
Stirling (C) - Central
Stirling (C) - Coastal
Stirling (C) - South-Eastern

- If the name includes - Pt A, - Pt B, or - Pt C, this indicates the SLAs were formed by splitting an LGA between one or more SSDs (see example below). In this case, - Pt A usually denotes the more urban part of the split LGA.

Example:

the LGA of the Municipality of Latrobe in Tasmania is split into two SLAs:
Latrobe (M) - Pt A
Latrobe (M) - Pt B

- An SLA which is part of an LGA may adopt a locality or suburb name.

Example:

the LGA of the City of Brisbane in Queensland is split into many SLAs, including:
Acacia Ridge
Albion
Yeronga
Zillmere

- An SLA which covers an unincorporated area does not contain LGA type. In New South Wales, Queensland and South Australia the SLA name may include Unincorp.

Example:

West Arnhem (in Northern Territory)
Bruce (in Australian Capital Territory)
Unincorp. Far West (in New South Wales)

- A small number of SLA names are duplicated across S/Ts and one SLA name is duplicated within an S/T. These names become unique when used in conjunction with SLA codes.

Example:

City (Queensland and Australian Capital Territory)
 City - Inner (Queensland and Northern Territory)
 City - Remainder (Queensland and Northern Territory)
 Kingston (Queensland and Australian Capital Territory)
 Oxley (Queensland and Australian Capital Territory)
 Red Hill (Queensland and Australian Capital Territory)
 West End (Townsville (C) and Brisbane (C))

SLA code

The coding conventions for SLAs are as follows:

- SLAs are identified by four-digit codes. These codes are unique only within an S/T. For unique Australia-wide identification the four-digit SLA code must be preceded by the unique one-digit S/T code.

Example:

Barraba (A) 0400 (in New South Wales) (S/T code 1)
 Barcaldine (S) 0400 (in Queensland) (S/T code 3)

- The fourth (last) digit of the SLA code indicates the following:
 - 0 means the SLA is a whole LGA.

Example:

Ashburton (S) 0250 (in Western Australia)

- 1–8 means the SLA is part of an LGA.

Example:

Sorell (M) - Pt A 4811 (in Tasmania)
 Sorell (M) - Pt B 4812 (in Tasmania)

- 9 means the SLA is either an unincorporated area, an Off-Shore Areas & Migratory SLA or an undefined category (see chapter 3, chapter 2, above, or chapter 8 respectively).

Example:

Bruce 0729 (in Australian Capital Territory)
 Off-Shore Areas & Migratory 9779

- Within each S/T, SLA codes are in the range of 0001–9990; codes ending with 99 and those within the range of 9991–9999 have been reserved for special purposes (see chapter 8).

- In the Main Structure, SLA codes are arranged in ascending numerical order within an SSD. Gaps have been provided between the codes for future expansion or change.

[Previous Page](#)

[Next Page](#)

Statistical Subdivision (SSD)

[Contents](#) >> [Chapter 2. Main Structure](#) >> [The spatial units](#) >> [Statistical Subdivision \(SSD\)](#)

The Statistical Subdivision (SSD) is a general purpose spatial unit of intermediate size between the SLA (smaller) and the SD (larger) in the Main Structure.

SSDs consist of one or more SLAs. In aggregate, they cover Australia (as defined in chapter 1) without gaps or overlaps. The larger spatial units of SDs and S Dists can be formed by aggregation of SSDs (see diagram 3, chapter 1). SSDs do not cross S/T boundaries except in the case of the Other Territories SSD, which comprises the three Territories of Jervis Bay, Christmas Island and Cocos (Keeling) Islands.

In this edition of the ASGC, there are 194 SSDs in Australia.

Delimitation of SSDs

The delimitation criteria for SSDs are as follows:

- SSDs are defined as socially and economically homogeneous regions characterised by identifiable links between the inhabitants. Moreover, in the non-urban areas (i.e. outside the capital cities or areas with population clusters of 25,000 or more people), an SSD is characterised by identifiable links between the economic units within the region, under the unifying influence of one or more major towns or cities.
- Where possible, SSD boundaries embrace contiguous whole LGAs. However, in some cases e.g. where S Dists or capital city SDs have been defined, an SSD may split the LGA into parts with each part of the LGA forming part of the relevant SSD (e.g. the SSDs of Gold Coast City Part A and Gold Coast City Part B dissect the LGA of Gold Coast City in Queensland).
- One or more SSDs must be defined for an S Dist that falls within an S/T.

Example:

the Ballarat City SSD in Victoria covers the same area as the Ballarat S Dist.

- One or more SSDs must be defined for each part of an S Dist which straddles an S/T boundary.

Example:

the Albury SSD in New South Wales plus the Wodonga SSD in Victoria together cover the same area as the Albury-Wodonga S Dist which lies partly in New South Wales and partly in Victoria.

- Where an SD contains an S Dist (or part of an S Dist), one or more SSDs must be defined for the S Dist and at least one SSD for the remainder of the SD which falls outside the S Dist even though the SSD(s) so defined may not have a predominant town or cluster of towns with a unifying socioeconomic influence over the region.

Example:

in New South Wales, the SSD of Hunter SD Bal is defined as the part of the Hunter SD which is outside the Newcastle S Dist (and Newcastle SSD).

- One Off-Shore Areas & Migratory SSD is defined for each S/T except the Australian Capital Territory and Other Territories.

SSD code

The coding conventions for SSDs are as follows:

- SSDs are identified by unique two-digit codes within SDs. Unique Australia-wide identification of SSDs is obtained by use of a five-digit code comprising S/T code (digit 1), SD code (digits 2–3) and SSD code (digits 4–5).

Example:

Albury	15505	(in New South Wales)
Wodonga	24505	(in Victoria)

- SSD code 88 has been reserved for special purposes (see chapter 8).
- In the Main Structure, SSD codes are arranged in ascending numerical order within an SD. Gaps have been provided between the codes for future expansion or change.

[Previous Page](#)

[Next Page](#)

Statistical Division (SD)

[Contents](#) >> [Chapter 2. Main Structure](#) >> [The spatial units](#) >> [Statistical Division \(SD\)](#)

The Statistical Division (SD) is a general purpose spatial unit and is the largest and most stable spatial unit within each S/T in the Main Structure.

SDs consist of one or more SSDs. In aggregate, they cover Australia (as defined in chapter

1) without gaps or overlaps. SDs aggregate to form S/Ts (see diagram 3, chapter 1).

In this edition of the ASGC, there are 66 SDs in Australia including one SD for the three Territories of Jervis Bay, Christmas Island and Cocos (Keeling) Islands.

Delimitation of SDs

The current basis for delimiting SDs was determined by the 31st and 33rd Conferences of Statisticians of Australia in 1969 and 1973. The delimitation criteria are as follows:

- SDs should ideally be delimited on the basis of socioeconomic criteria and should, where possible, embrace contiguous whole local government areas.
- SD boundaries so delimited should be changed only at infrequent intervals, for example, at periods of 15 - 20 years.
- SD boundaries should be determined in time for use in the next Population Census if practicable.
- A Capital City SD (currently one in each capital city) should be defined, after consultation with planners, to contain the anticipated development of the city for a period of at least 20 years. This fixed SD boundary - as distinct from the moving urban centre boundary - delimits an area which is stable for general statistical purposes. It represents the city in a wider sense. This delimitation procedure cannot be applied to the separate urban centres within a Capital City SD.
- SDs outside a capital city should be defined as a relatively homogeneous region characterised by identifiable social and economic links between the inhabitants and between the economic units within the region, under the unifying influence of one or more major towns or cities.

More specifically, the SDs within the individual S/T have been delimited as follows:

- In New South Wales, SDs correspond to proclaimed Government Regions with the exception that North Coast Region consists of the SDs of Richmond - Tweed and Mid - North Coast. These Regions were delimited to maximize the degree of socioeconomic interactions within each Region. Information on transport patterns, telephone traffic between major cities and towns, retail shopping, fresh goods marketing, provincial newspaper circulation areas and coverage of principal radio stations were all used in delimiting these boundaries.
- In Victoria, the SDs prior to 1995 generally corresponded to State Planning Regions adopted by the Victorian Government in October 1981. However, following the restructuring of local government in that State during 1994 and 1995, the SDs were redefined to accord with the general considerations and criteria outlined above.
- In Queensland, formal State Planning Regions have been abolished. SDs are used on an informal basis for State Government planning purposes where relevant. SD delimitation follows the general criteria outlined above.
- In South Australia, State Planning Regions, as proposed by the Committee

on Uniform Regional Boundaries for Government Departments (CURB), were adopted by the South Australia Government in 1976. CURB Regions were based on such factors as: population density and distribution, socioeconomic characteristics, political boundaries, government service areas, newspaper circulation, retail trading patterns, etc. Prior to 1998, South Australian SDs did not always correspond to CURB Regions but they always aggregated to these Regions. However, following the restructuring of local government in South Australia in 1996 and 1997, the SDs were redefined to accord with the general considerations and criteria outlined above.

- In Western Australia, State Planning Regions, as proposed by the State Statistical Coordination Committee, were adopted by the Western Australia Government in January 1976. SDs in Western Australia correspond to these Regions. The Perth Metropolitan Region is delimited to be consistent with the overall concepts and planning of Perth and to take into account LGA and CD boundaries. Rural Regions on the other hand are delimited based on the socioeconomic interest of the community; the character of natural resource; the distribution of population and industries; town size; road and railway systems; and production and marketing practices.
- In Tasmania, SD delimitation follows the general considerations and criteria outlined above. They are considered satisfactory for the purpose of State Government planning.
- In the Northern Territory, SDs are based on Territory Government Administrative Regions, and are consistent with the general considerations and criteria for their delimitation described above.
- In the Australian Capital Territory, SD delimitation follows the general considerations and criteria outlined above.
- In the Other Territories, the SD has been delimited to represent the aggregated area of the Territories of Jervis Bay, Christmas Island and Cocos (Keeling) Islands.

SD name

SD names tend to indicate their generalised region (e.g. Far North in Queensland). SD names are unique only within an S/T as a small number of SD names are replicated between the States (see example below). SD names become unique when used in conjunction with their SD codes or referenced to their respective State code. One Off - Shore Areas & Migratory SD is defined for each S/T except the Australian Capital Territory and the Other Territories.

Example:

Central West (in New South Wales and Queensland)
Northern (in New South Wales, Queensland, South Australia and Tasmania)
South West (in Queensland and Western Australia)
South Eastern (in New South Wales and Western Australia)

SD code

The coding conventions for SDs are as follows:

- SDs are identified by unique two - digit codes within an S/T. Unique Australia - wide identification of SDs requires a three - digit code comprising S/T code (digit 1) and SD code (digits 2 - 3)

Example:

Adelaide	405
Kimberley	545

- The SD code 85 is reserved for Off - Shore Areas & Migratory SDs and the SD code 88 has been reserved for special purposes (see chapter 8).
- In the Main Structure, SD codes are arranged in ascending numerical order within an S/T. Gaps have been provided between the codes for future expansion or change.

[Previous Page](#)

[Next Page](#)

State and Territory (S/T)

[Contents](#) >> [Chapter 2. Main Structure](#) >> [The spatial units](#) >> [State and Territory \(S/T\)](#)

The State and Territory (S/T) is the largest spatial unit in the Main Structure and in the ASGC. Six States and five Territories are recognised in the ASGC: New South Wales, Victoria, Queensland, South Australia, Western Australia, Tasmania, Northern Territory, Australian Capital Territory, Jervis Bay Territory and the external Territories of Christmas Island and Cocos (Keeling) Islands.

These spatial units are political entities with fixed boundaries. Except for the last three mentioned territories, the total area of each S/T, including their off-shore islands, is used for statistical purposes as a separate spatial unit in the ASGC. Jervis Bay Territory, and the Territories of Christmas Island and Cocos (Keeling) Islands are included as one spatial unit at the S/T level under the category of Other Territories.

S/Ts consist of one or more SDs. In aggregate, they cover Australia (as defined in chapter 1) without gaps or overlaps.

S/T code

S/Ts are identified by unique one-digit codes within Australia as follows:

CodeS/T

- 1 New South Wales
- 2 Victoria
- 3 Queensland
- 4 South Australia
- 5 Western Australia

- 6 Tasmania
 - 7 Northern Territory
 - 8 Australian Capital Territory
 - 9 Other Territories
-

This coding order has been widely used in the ABS and other organizations as a standard for many years. The order was reviewed when Western Australia displaced South Australia as the fourth most populous State. Citing the Commonwealth Table of Precedence, which adopted a revised listing such that any textual material having protocol significance should list Western Australia before South Australia, some users requested the code for Western Australia be changed to four and South Australia to five. For the ASGC however, the above order was maintained to ensure historical continuity, to reduce potential errors in data handling and interpreting, and to avoid costs associated with changing existing systems.

[Next Page](#)

Chapter 3. Local Government Area (LGA) Structure

[Contents >> Chapter 3. Local Government Area \(LGA\) Structure](#)

This section contains the following subsection :

- Purpose and structure
- The spatial units

[Previous Page](#)

[Next Page](#)

Purpose and structure

[Contents >> Chapter 3. Local Government Area \(LGA\) Structure >> Purpose and structure](#)

Purpose

The LGA Structure shows the relationship between LGAs and SLAs. This relationship can be one LGA to one SLA or one LGA to many SLAs.

The LGA Structure is maintained as a separate structure from the Main Structure because:

- unlike spatial units in the Main Structure, LGAs do not cover the whole of Australia; and
- unlike SLAs which aggregate to form SSDs and SDs, some LGAs do not wholly fit within an SSD and an SD (e.g. Gold Coast City in Queensland).

The structure

Incorporated areas only

The LGA Structure covers only incorporated areas of Australia. Incorporated areas are

legally designated areas over which incorporated local governments have responsibility. The major areas of Australia not covered by incorporated bodies are the northern parts of South Australia, most of the Northern Territory and all of the Australian Capital Territory and the Other Territories.

The LGA Structure has four levels of hierarchy in Population Census years, comprising in ascending order: CDs–SLAs–LGAs–S/Ts (Incorporated Areas). In non-census years, with CDs undefined, it has only three levels of hierarchy. The spatial units in each level relate to the spatial units in other levels through aggregation or disaggregation. For example, CDs aggregate to SLAs while SLAs are disaggregates of LGAs. The spatial units within each level collectively cover only the ‘incorporated’ areas of Australia.

LGAs included in the structure

LGAs are proclaimed by various State government authorities and are gazetted throughout the year. Presently, LGAs are used as the base on which SLAs are defined for the ASGC. Because this definition process takes time, LGAs gazetted during the year leading up to an ASGC edition cannot always be processed in time for inclusion in that edition. For instance, complex LGA changes which result in complicated redesign of SLAs, or changes gazetted too close to the effective date of 1 July of an ASGC edition, may sometimes have to be included in a later edition.

Table

The current LGA Structure, down to SLA level, is shown in the table - Alphabetic List of LGAs and SLAs within States/Territories - in chapter 12.

Example:

S/T	SD	SSD	LGA	SLA	LGA/SLA name
1			0850		Blayney (A)
1	40	05		0851	Blayney (A) - Pt A
1	40	10		0852	Blayney (A) - Pt B

Note that there is no SD or SSD code for the LGA because LGAs are not part of the Main Structure. This table also shows SLAs which cover unincorporated areas and are therefore not part of the LGA Structure.

Example:

S/T	SD	SSD	LGA	SLA	LGA/SLA name
1	60	10		8809	Unincorp. Far West

Census Collection District (CD)

See chapter 2, The spatial units.

Statistical Local Area (SLA)

See chapter 2, The spatial units.

Local Government Area (LGA)

The LGA is a spatial unit which represents the whole, undivided geographical area of responsibility of either an incorporated Local Government Council, or an incorporated CGC of sufficient size and statistical significance in the Northern Territory.

An LGA consists of one or more SLAs. LGAs aggregate directly to form the incorporated areas of S/Ts (see diagram 3, chapter 1). In this edition of the ASGC, there are 627 LGAs. The major unincorporated areas, not covered by LGAs, are the large northern parts of South Australia, most of the Northern Territory, all of the Australian Capital Territory and the Other Territories.

Delimitation of LGAs

The number of LGAs and their boundaries vary over time. Their creation and delimitation is the responsibility of the respective State/Territory Governments and is governed by the provision of the Local Government Acts within the particular State/Territory.

Traditionally, local governments have developed around communities. The boundaries to these areas have occurred for physical reasons (i.e. rivers or roads), for socioeconomic reasons (e.g. focused around an industry) or because the government has provided infrastructure as an incentive to attract population.

More recently, with the aim of administrative efficiency, the Victorian and South Australian Governments have amalgamated local governments and other States are reviewing their local government structures.

LGA types

In all States and the Northern Territory each incorporated area has an official status. In this ASGC edition, the various LGA status types currently in use are:

- New South Wales: Cities (C) and Areas (A)
- Victoria: Cities (C), Rural Cities (RC), Boroughs (B) and Shires (S)
- Queensland: Cities (C), Shires (S) and Towns (T)
- South Australia: Cities (C), Rural Cities (RC), Municipalities/Municipal Councils (M) and District Councils (DC)
- Western Australia: Cities (C), Towns (T) and Shires (S)
- Tasmania: Cities (C) and Municipalities (M)
- Northern Territory: Cities (C), Towns (T), Community Government Councils (CGC) and Shires (S)

LGA name

The naming conventions for LGAs in the ASGC are as follows:

- LGA names include a suffix which identifies the LGA’s status.

Example:

Albury (C)
Copper Coast (DC)

- With one exception, LGA names are unique across States and Territories. The LGA name Campbelltown (C) is duplicated between New South Wales and South Australia. This LGA name will become unique only when used in conjunction with its LGA code or respective State code.

LGA code

LGAs are identified by four-digit codes as follows:

- Codes are unique only within an S/T. For unique Australia-wide LGA code identification, the four-digit code must be preceded by a unique one-digit S/T code. All LGA codes end with the digit 0.

Example:

Blayney (A)	0850 (in New South Wales) (S/T code 1)
Booringa (S)	0850 (in Queensland) (S/T code 3)

- Where an LGA corresponds to an SLA, the LGA code and the SLA code are identical.

Example:

LGA	SLA
Bathurst (C) 0450	Bathurst (C) 0450

- Where an LGA consists of more than one SLA the first three digits of the LGA code and the SLA code are, in most cases, identical. The 13 exceptions to this general rule are explained in **Special case LGA codes**, below

Example:

LGA	SLA
Latrobe (M) 3810	Latrobe (M) - Pt A 3811 Latrobe (M) - Pt B 3812

Special case LGA codes

When an LGA consists of many component SLAs, it becomes impossible to maintain a three-digit link between the LGA code and the SLA codes. This occurs for the LGAs of: Queensland—Brisbane (C), Gold Coast (C), Logan (C), Pine Rivers (S), Redland (S),

Caboolture (S), Maroochy (S), Ipswich (C), Cairns (C), Thuringowa (C) and Townsville (C); and for the Northern Territory—Darwin (C) and Palmerston (T).

Example: the LGA of Brisbane (C) in Queensland is split into many SLAs, including:

LGA	SLA
Brisbane (C)	1000
	Acacia Ridge 1001
	Yeronga 1648
	Zillmere 1653

State/Territory (S/T)

See chapter 2, The spatial units.

[Previous Page](#)

[Next Page](#)

Chapter 4. Statistical District Structure

[Contents >> Chapter 4. Statistical District Structure](#)

This section contains the following subsection :

- Purpose and structure
- The spatial units

[Previous Page](#)

[Next Page](#)

Purpose and structure

[Contents >> Chapter 4. Statistical District Structure >> Purpose and structure](#)

Purpose

The Statistical District (S Dist) Structure maintains a list of selected, significant, predominantly urban areas in Australia which are not located within a Capital City SD (see chapter 2). Statistical Districts enable comparable statistics to be produced about these selected urban areas. In the main, the structure is used to report intercensal population estimates.

Statistical Districts are maintained as a separate structure from the Main Structure because:

- the total area of Statistical Districts does not cover the whole of Australia; and
- some Statistical Districts straddle S/T boundaries (e.g. the Gold Coast-Tweed Statistical District lies partly in Queensland and partly in New South Wales).

The structure

The Statistical District Structure has four levels of hierarchy in census years, comprising in ascending order: CDs–SLAs–SSDs–Statistical Districts. In non-census years, with CDs undefined, it has only three levels of hierarchy (see diagram 3, chapter 1).

In this structure, CDs, SLAs and SSDs are confined to those which fall within Statistical Districts. The spatial units relate to each other through aggregation or disaggregation. For example, CDs aggregate to SLAs while SLAs are disaggregates of SSDs. The spatial units within each level of the Statistical District Structure do not collectively cover the whole of Australia.

Table

The current Statistical District Structure, down to SLA level, is shown in the following table in chapter 12 of this manual:

Statistical District Structure			
(showing three hierarchical levels: S Dist–SSD–SLA)			
S Dist	SSD	SLA	Name
1006			WOLLONGONG (New South Wales)
	05		Wollongong
		4400	Kiama (A)
		6900	Shellharbour (C)
		8450	Wollongong (C)

[Previous Page](#)

[Next Page](#)

The spatial units

[Contents](#) >> [Chapter 4. Statistical District Structure](#) >> [The spatial units](#)

Census Collection District (CD)

See chapter 2, The spatial units.

Statistical Local Area (SLA)

See chapter 2, The spatial units.

Statistical Subdivision (SSD)

See chapter 2, The spatial units.

Statistical District (S Dist)

S Dists are predominantly urban areas, the boundaries of which are designed to contain the

anticipated urban spread of the area for at least 20 years. They are generally defined as containing an urban centre population of 25,000 or more.

S Dists consist of one or more SSDs. S Dists do not aggregate to any higher level spatial units (see diagram 3, chapter 1).

There are 21 S Dists in this edition of the ASGC. Three of these straddle two States: Albury-Wodonga (New South Wales/Victoria), Gold Coast-Tweed (Queensland/New South Wales) and Canberra-Queanbeyan (Australian Capital Territory/New South Wales).

Delimitation of S Dists

The criteria for delimiting S Dists are as follows:

- S Dists consist of one or more urban centres (outside Capital City SDs) in close proximity with a population of 25,000 or more;
- S Dist boundaries are defined in anticipation of urban development of at least 20 years;
- S Dists consist of one or more SSDs;
- S Dists may cut across LGA boundaries;
- S Dists may cut across State/Territory (S/T) boundaries; and
- an S Dist may be delimited for an urban centre with less than 25,000 population, where the ABS can determine a demand for intercensal population estimates for the area and the existing LGA/SLA boundaries are inadequate for this purpose.

S Dist name

S Dist names include a suffix which identifies the S/Ts in which the S Dist is located.

Example:

Newcastle (NSW)
Albury-Wodonga (NSW/VIC)

S Dist code

S Dists are identified by four-digit codes which are unique within Australia. The first two digits indicate the S/T(s) in which the S Dist is located. For the three S Dists which cover two States, the first digit is the code of the predominant State and the second digit is the code of the other State. For the other S Dists which fall entirely within one S/T, the first digit is the S/T code and the second digit is 0. The last two digits are allocated in ascending numerical order. Gaps are left between codes for future expansion.

Example:

Newcastle (New South Wales)	1003
Albury-Wodonga (New South Wales/Victoria)	1218
Gold Coast-Tweed (Queensland/New South Wales)	3139
Canberra-Queanbeyan (Australian Capital Territory/ New South Wales)	8196

Chapter 5. Statistical Region Structure

[Contents >> Chapter 5. Statistical Region Structure](#)

This section contains the following subsection :
 Purpose and structure
 The spatial units

Purpose and structure

[Contents >> Chapter 5. Statistical Region Structure >> Purpose and structure](#)

Purpose

The SR Structure has been in use since 1986 for the production of standard statistical outputs from Population Censuses and labour force surveys. Labour Force Surveys use over 70 dissemination regions for the publication of labour force data.

SRs are maintained as a separate structure from the Main Structure because of the complex manner in which they relate to SSDs and SDs. For example, SRs can be whole SSDs, aggregates of SSDs, or part of an SSD. Similarly they can be whole SDs, aggregates of SDs or part of an SD. SRs can also be as large as a State or Territory. SRs are aggregates of SLAs.

The structure

The SR Structure has six levels of hierarchy in census years, comprising in ascending hierarchical order:

CDs – SLAs – SRSs – SRs – MSRs – S/Ts.

In non-census years, with CDs undefined, it has only five levels of hierarchy (see diagram 3, chapter 1).

The spatial units in adjoining levels relate to each other by aggregation and disaggregation. For example, SRSs aggregate to SRs while SRs are disaggregates of MSRs. The spatial units within each level of the SR Structure cover the whole of Australia (as defined in chapter 1) without gaps or overlaps.

Table

The current SR Structure is shown in the following tables in chapter 12:

Broad Statistical Region Structure
(showing three hierarchical levels: S/T–MSR–SR)

S/T	MSR	SR	Name
4			SOUTH AUSTRALIA
	1		Adelaide
		04	Northern Adelaide
		08	Western Adelaide
		12	Eastern Adelaide
		16	Southern Adelaide

Detailed Statistical Region Structure

(showing five hierarchical levels: S/T–MSR–SR–SRS–SLA)

S/T	MSR	SR	SRS	SLA	Name
4					SOUTH AUSTRALIA
	1				ADELAIDE
		04			Northern Adelaide
			1		Northern Adelaide
				2030	Gawler (M)
				5681	Playford (C) - East Central

[Previous Page](#)

[Next Page](#)

The spatial units

[Contents >> Chapter 5. Statistical Region Structure >> The spatial units](#)

Census Collection District (CD)

See chapter 2, The spatial units.

Statistical Local Area (SLA)

See chapter 2, The spatial units.

Statistical Region Sector (SRS)

SRSs consist of one or more adjoining SLAs and in all but three cases equate to one or more adjoining SSDs.

Example:

SRS	SSD	SLA
Mornington Peninsula	Frankston City	Frankston (C) - East Frankston (C) - West
	Mornington Peninsula Shire	Mornington P'sula (S) - East

The three exceptions are:

- nine of the 17 SRSs in the Brisbane MSR are smaller than an SSD;
- South and East Moreton Balance SRS in Queensland is smaller than an SSD. It equates with the SLA of Beaudesert (S) - Pt B; and
- North and West Moreton SRS in Queensland equates with two SSDs minus the SLA of Beaudesert (S) - Pt B.

Although SRSs are subdivisions of SRs, most SRSs equate with SRs. Exceptions to this generalised rule include the SRSs in the Hunter, Illawarra, Mackay-Fitzroy-Central West, Northern-North West, South and East Moreton, Darling Downs-South West, Tasmania and Northern Territory SRs and the SRSs in the Brisbane MSR. SRSs are used primarily for disseminating selected labour force statistics. SRSs have also been used to present a range of regional statistics not incorporated in the Main Structure.

Example:

SR	SRS
Brisbane City Inner Ring	City Core Northern Inner Eastern Inner Southern Inner Western Inner
Brisbane City Outer Ring	Northern Outer Eastern Outer Southern Outer Western Outer

There are 88 SRSs in this edition of the ASGC.

SRS code

SRSs are identified by five-digit codes. Each code consists of S/T code (digit 1), MSR code (digit 2), SR code (digits 3–4) and SRS code (digit 5).

Example:

Mornington Peninsula (21281)

Only digits 1, 3–4 and 5 are required for unique identification within Australia.

Statistical Region (SR)

SRs consist of one or more adjoining SSDs in all but three cases.

The three exceptions are:

- Brisbane City Inner Ring SR and the Brisbane City Outer Ring SR are smaller than an SSD. Collectively they form the Brisbane City SSD;
- South and East Moreton SR comprises one SSD plus the SLA of Beaudesert (S) - Pt B; and
- North and West Moreton SR equates with two SSDs minus the SLA of Beaudesert (S) - Pt B.

In the capital cities of the five larger States of New South Wales, Victoria, Queensland, South Australia and Western Australia, SRs are smaller than SDs and aggregate to form the respective capital city SDs. Outside of the capital cities in these S/Ts, SRs consist of one or more adjoining SDs.

In Tasmania, Northern Territory, Australian Capital Territory and Other Territories, SRs are the entire S/Ts.

There are 65 SRs in this edition of the ASGC.

SR code

SRs are identified by four-digit codes as follows:

- Each code consists of S/T code (digit 1), MSR code (digit 2) and SR code (digits 3–4).

Example:

South and Eastern Moreton
3964
Gosford-Wyong 1156

The SR code 98 has been reserved for special purposes (see chapter 8).

Major Statistical Region (MSR)

Each of the five larger States of New South Wales, Victoria, Queensland, South Australia and Western Australia consists of two MSRs. One MSR equates with the capital city SD and the other with the balance of the State. The other S/Ts have one MSR each with each MSR covering the entire area of the S/T.

There are 14 MSRs in this edition of the ASGC.

MSR code

MSRs are identified by two-digit codes for unique identification within Australia. Each code consists of an S/T code (digit 1) and an MSR code (digit 2). MSR code 1 represents the capital city MSR in the larger States while code 9 denotes the Balance of State MSR.

Example:

MSR

Delimitation of MSR, SR, SRS

One of the main uses of these spatial units is to report statistics from the Labour Force Surveys. These units were established following analyses of data from Censuses of Population and Housing, consultation with users of labour force data, consideration of minimum regional population levels required to yield reliable estimates, and the need for consistency with other statistical collections.

Population considerations dictate that Tasmania, Northern Territory, Australian Capital Territory and Other Territories cannot be dissected into two MSRs (as in the other States) as their populations are too small.

The minimum population size of a region for which labour force statistics are published depends on a number of factors. The prime determinant is the reliability of data based on the population size of the region and the sampling fraction of the S/T. Unlike State and MSR level data, estimates at lower geographic levels are not constrained to conform to independently estimated population totals. Estimates for regions are also based on considerably smaller samples. For these reasons, regional estimates may be subject to high relative standard errors. Other factors that may be considered are how well the region fits with the classification structure of the S/T, how homogenous the labour force is in the region, and the uses to which the data may be put.

For further information on current regions for which Labour Force Survey data are published, see Information Paper: Regional Labour Force Statistics, September 1997 (cat. no. 6262.0).

State/Territory (S/T)

See chapter 2, The spatial units.

[Previous Page](#)

[Next Page](#)

Chapter 6. Urban Centre/Locality (UC/L) Structure

[Contents >> Chapter 6. Urban Centre/Locality \(UC/L\) Structure](#)

This section contains the following subsection :

Purpose and structure

The spatial units

[Previous Page](#)

[Next Page](#)

Purpose and structure

Purpose

The UC/L Structure groups CDs together to form defined areas according to population size criteria. The resulting areas are known as Urban Centres or Localities. Population counts (place of enumeration) from the latest Census of Population and Housing are used to define the UC/L Structure which means this classification structure is only current at the time of the Census. Both the Urban Centre and the Locality spatial units are made up of one or more contiguous CDs. As the UC/L Structure relates to CDs within defined areas only, the structure, in aggregate, does not cover all of Australia.

The UC/L Structure is used for the production of standard ABS statistical outputs from Population Censuses such as Selected Social and Housing Characteristics for Urban Centres and Localities (cat. nos 2016.0–.7), CDATA96 (cat. nos 2019.0.30.001–.8.30.001) and Community Profiles (cat. nos 2020.0–.9).

The UC/L Structure is separate from the Main Structure because:

- the boundaries do not generally coincide with SLAs and the higher level spatial units in the Main Structure; and
- its total area covers only part of Australia.

The structure

The UC/L Structure is defined at Population Census times only. It comprises in ascending hierarchical order: CDs–Urban Centres/Localities.

CDs within this structure are confined to those within defined Urban Centre and Locality boundaries. As a consequence, Urban Centres and Localities aggregate to cover only part of a State or Territory and thus the structure covers part of Australia only.

Urban Centres may be bisected by an S/T boundary. Where this occurs each portion of the urban centre is separately identified and is included in the Urban Centre/Locality Structure for the relevant S/T. For example, the urban centre of Albury-Wodonga is partly in New South Wales and partly in Victoria. One part is shown under New South Wales and the other under Victoria.

Table

Urban Centres and Localities are delimited by the use of actual population counts after each census is conducted. The urban centres and localities determined following the 1996 Census are listed in the publication Statistical Geography: Volume 3 - Australian Standard Geographical Classification (ASGC) Urban Centres/Localities (cat. no. 2909.0).

Example:

Code		
S/T	UC/L	Name
1		NEW SOUTH WALES
	00200	Aberdeen
	00400	Adaminaby (L)

In this table, Urban Centre and Locality names are listed alphabetically and UC/L codes are arranged in ascending numerical order within each S/T. An (L) is shown after Locality names to distinguish Localities from Urban Centres.

Listings of component CDs of 1996 Urban Centres and Localities are available through all ABS offices.

Census Collection District (CD)

See chapter 2, The spatial units.

Urban Centre/Locality (UC/L)

In broad terms, an Urban Centre is a population cluster of 1,000 or more people while a Locality is a population cluster of between 200 and 999 people. For statistical purposes, people living in Urban Centres are classified as urban while those in Localities are classified as rural.

Each Urban Centre/Locality has a clearly defined boundary and comprises one or more whole CDs. Urban Centres/Localities are redefined at each Population Census.

Delimitation of Urban Centres and Localities

The delimitation criteria for UC/Ls are based on those developed in 1965 by Dr G.J.R. Linge from the Australian National University. The criteria that are currently in force have been adopted and subsequently amended by the Conferences of Statisticians of Australia in 1965 and 1969 and the Review of ABS Statistical Geography in 1988.

Delimitation of Urban Centres with 20,000 or more people

The criteria are as follows:

- Each Urban Centre with a population of 20,000 or more is to consist of a cluster of contiguous urban CDs and other urban areas. CDs classified as urban include the following:
 - All contiguous CDs which have a population density of 200 or more persons per square kilometre shall be classified as urban. Consequently State, SD, LGA and other administrative boundaries shall be disregarded in determining whether a CD should be included within the Urban Centre.
 - A CD consisting mainly of land used for factories, airports, small sports areas, cemeteries, hostels, institutions, prisons, military camps

or certain research stations shall be classified as urban if contiguous with CDs which are themselves urban.

- A CD consisting mainly of land used for large sporting areas, large parks, explosives handling and munitions areas, or holding yards associated with meatworks and abattoirs shall be classified as urban only if it is bordered on three sides by CDs which are themselves classified as urban.
- Any area which is completely surrounded by CDs which are urban must itself be classified as urban.
 - Where an Urban Centre of 20,000 or more population is separated from another urban area by a gap in urban development of less than three kilometres (by the shortest railway or road distance), the gap shall be bridged by classifying a connecting CD as urban, and therefore treating the urban areas as one. If the gap is three or more kilometres (and whether or not it is comprised mainly of reserved land or a natural barrier) the urban areas shall remain separate.
 - Any area included in an Urban Centre in 1971 or thereafter under the provisions of these criteria shall continue to be so included, unless the population of the Urban Centre falls below 20,000, in which case these criteria will cease to apply.
 - If a CD was incorrectly included (for whatever reason) in a Linge area at a previous census, then it should be excluded at the next census unless it now meets the criteria.
 - Large peripheral CDs in growth areas may be fragmented; and insofar as the availability of visible boundary features allows, the fragments so created shall be as near square-shaped as possible, contain at least 100 persons at the next census and be of such a size that they will contain a collector's workload when fully developed. For the purpose of delimiting Urban Centres such fragments shall be regarded as CDs.

Delimitation of Urban Centres with 1,000 to 19,999 people

- Each Urban Centre with a population between 1,000 and 19,999 is to be delimited as follows:
 - The Urban Centre shall be delimited subjectively by the inspection of aerial photographs, by field inspection and/or by consideration of any other information that is available.
 - All contiguous urban growth is to be included (even if this would not necessarily occur if the density criterion were applied), together with any close but non-continuous development which could be clearly regarded as part of the Urban Centre. However, for urban centres which contain a population approaching 20,000 the objective criteria applied for urban centres with 20,000 people should also be considered.

Delimitation of Localities

- Localities are to be delimited as follows:
 - All population clusters of less than 1,000 population and whose population is expected to reach 200 by the next census are to be examined for boundary delineation.
 - The following criteria must be satisfied before a boundary is drawn around a Locality. It must:
 - contain a non-farm population of at least 200 people but not more than 999 by the next census;
 - have a minimum of 40 occupied non-farm dwellings with a discernible urban street pattern; and
 - have a discernible nucleus of population.
 - If there is some doubt that a Locality will reach the minimum population of 200 people then a boundary should still be drawn around the Locality.
 - Where, in the case of defence camps, construction camps, etc. it is anticipated that the cluster will not exist at two consecutive censuses, these camps should not be bounded.
 - The Localities shall be delimited subjectively, by the use of the latest available aerial photographs, by field inspection and/or by consideration of any other information that is available.

Subjective guidelines

Guidelines for the drawing of subjectively determined UC/L boundaries are as follows:

- Wide rather than narrow boundaries are to be used to ensure inclusion of all urban or built-up areas. Some rural area can be included in an Urban Centre, if necessary, to ensure that the boundary encompasses all the urban area. However, this guideline should be interpreted in the light of the ones that follow.
- Continuity of urban development is a major consideration. Boundaries are not to be thrown very wide just to include some small non-contiguous area of urban development. (The Linge criterion of three kilometres may be of assistance in this respect in larger Urban Centres of say greater than 10,000–15,000 population.)
- Where the subjective boundaries decided upon are contained within a municipal boundary and the remaining area or population is small, the municipal boundary is to be used.
- For previously bounded cities, towns or localities the boundaries are not to be changed lightly. Comparability is to be maintained with the past unless there are significant exclusions (either due to faulty boundaries at the previous census or subsequent development).
- When considering urban land usage, recognition should be given to approved plans.

- Topographic boundaries must be used wherever possible when they are consistent with the above guidelines.

UC/L name and code

When Urban Centres cross S/T boundaries, the separate portions of the Urban Centre are uniquely identified and reported in their relevant S/T.

UC/Ls are identified by a five-digit code which is only unique within each State/Territory. Use of UC/L codes in conjunction with S/T codes is necessary before these codes become unique across Australia.

Example:

Code		
S/T	UC/L	Name
1		NEW SOUTH WALES
	00800	Albury-Wodonga (Albury part)
2		VICTORIA
	00400	Albury-Wodonga (Wodonga part)

The codes 00000 and 99999 are reserved as Rural Balance and Off-Shore and Migratory codes, respectively, for each S/T.

State/Territory (S/T)

See chapter 2, The spatial units.

Chapter 7. Section of State (SOS) Structure

[Contents >> Chapter 7. Section of State \(SOS\) Structure](#)

This section contains the following subsection :

Purpose and structure

The spatial units

[Previous Page](#)

[Next Page](#)

Purpose and structure

[Contents >> Chapter 7. Section of State \(SOS\) Structure >> Purpose and structure](#)

Purpose

The Section of State (SOS) Structure is the final classification structure in the ASGC (see diagram 3, chapter 1). Like the UC/L Structure (chapter 6), the SOS Structure uses

population counts from the latest Census of Population and Housing to define CDs between urban and rural. Unlike the UC/L Structure, the SOS Structure relates to all CDs and therefore, in aggregate, the SOS Structure covers all of Australia (as defined in chapter 1). There are five different SOS in this classification, with each SOS made up of geographical areas of a particular type within the S/T.

The SOS Structure is used for the production of standard statistical outputs from Population Censuses such as Selected Social and Housing Characteristics for Urban Centres and Localities (Cat. nos 2016.0–.7) and CDATE96 (Cat. Nos 2019.0.30.001–.8.30.001). It is also used to classify data collected from the labour force surveys.

The SOS Structure is maintained as a separate structure in the ASGC because SOS spatial units do not align with spatial units from any of the other structures.

The structure

The SOS Structure is defined only in census years. It contains three hierarchical levels, comprising in ascending hierarchical order: CDs–SOS–S/Ts.

In this structure, CDs aggregate to SOS and SOS aggregate to S/Ts without gaps or overlaps. Consequently, the structure covers all of Australia.

Table

The Sections of State determined following the 1996 Census are listed in the publication Statistical Geography: Volume 1—Australian Standard Geographical Classification (ASGC) (Cat. no. 1216.0). This listing provides:

- Section of State Structure: States/Territories, Sections of State (showing only the top two hierarchical levels: S/T–SOS)

Example:

S/T SOS	
1	New South Wales
0	Major Urban
1	Other Urban
2	Bounded Locality
3	Rural Balance
4	Migratory

Listings of component CDs of SOS, for census year 1996, are available from the ABS as a Customised Geographic Data Report.

The spatial units

Census Collection District (CD)

See chapter 2, The spatial units.

Sections of State (SOS)

Within a State or Territory, each SOS represents an aggregation of non-contiguous geographical areas of a particular urban/rural type. The five categories are:

- Major Urban: urban areas (Urban Centres in the UC/L Structure) with a population of 100,000 and over;
- Other Urban: urban areas (Urban Centres in the UC/L Structure) with a population of 1,000 to 99,999;
- Bounded Locality: rural areas (Localities in the UC/L Structure) with a population of 200 to 999;
- Rural Balance: the remainder of the S/T; and
- Migratory: areas composed of off-shore, shipping and migratory CDs see chapter 2, The spatial units.

SOS code

SOS are identified by unique one-digit codes within each State/Territory. For unique Australia-wide identification, each SOS code has to be used in conjunction with the S/T code.

State/Territory (S/T)

See chapter 2, The spatial units.

[Next Page](#)

Chapter 8. Special purpose ASGC codes

[Contents >> Chapter 8. Special purpose ASGC codes](#)

This section contains the following subsection :

- Purpose
- Main structure
- Statistical Region structure

[Previous Page](#)

[Next Page](#)

Purpose

To allow data to be coded when only incomplete locational information is available, a series of special purpose codes has been created for each hierarchical level within the ASGC's Main Structure and for SRs within the SR Structure. These codes are used when people provide limited address details or have no fixed place of abode.

Special purpose codes enable data to be coded to the broadest hierarchical level reported. For example, a reported address may be sufficiently detailed to allow it to be coded to a Capital City SD within a S/T, even though it cannot be coded to an SSD within that Capital City SD.

Coding data to a higher level unit in a hierarchical classification without also coding it to the lower levels would cause the data value for the higher unit to no longer equal the sum of data values for the lower units. Special purpose (i.e. dummy area) codes have therefore been created for each hierarchical level in the Main Structure and for SRs within the SR Structure, to which geographically undefined data can be classified.

[Previous Page](#)

[Next Page](#)

Main structure

In the Main Structure special purpose codes relate to, in ascending hierarchical order: SLAs, SSDs, SDs and S/Ts.

Special purpose SLA codes

Four-digit SLA codes ending with 99 are reserved for coding undefined area data to SLA level. The first two digits of undefined SLA codes are normally in the range 00–89.

Example:

0199	Inner Sydney Undefined
2799	Gosford-Wyong Undefined

These codes are used in the following cases:

- Data required to be coded at SLA level but only able to be coded at SSD level, is coded to the undefined SLA within the defined SSD.

Example:

SD SSD SLA	
<hr/>	
05	Sydney
70	Gosford-Wyong
2799	Gosford-Wyong Undefined

- Data required to be coded at SLA level but only able to be coded at SD

level, is coded to the undefined SLA of the undefined SSD (see chapter 8) within the defined SD.

Example:

SD	SSD	SLA
05		Sydney
	88	Sydney Undefined
	0099	Sydney Undefined

A number of SLA codes within the range 0099–9999 are reserved for specific applications.

- Code 0099 is reserved for the undefined SLA in each capital city SD.

Example:

S/T	SD	SSD	SLA
1	05	88	0099 Undefined Sydney

- Code 9899 is reserved for the undefined SLA within an undefined SD, within a defined S/T. For example, when data is required to be coded at SLA level but is only able to be coded at the S/T level, it is coded to SLA 9899.

Example:

S/T	SD	SSD	SLA
1	88	88	9899 Undefined New South Wales
8	88	88	9899 Undefined Australian Capital Territory

- Code 9099 is reserved for the undefined SLA within an undefined SD, within an undefined S/T (see below). For example, when data is required to be coded at SLA level but is only able to be coded at the Australia level, it is coded to SLA 9099. This code is used to code Population Census data when usual residence information is not stated.

Example:

S/T	SD	SSD	SLA
0	88	88	9099 Undefined S/T, Not Stated for census purposes

- Code 9199 is used in 'usual residence' and similarly worded coding where the information is not applicable (e.g. children who had not been born five years ago).

Example:

S/T	SD	SSD	SLA
1	88	88	9199 Not Applicable, New South Wales

- Code 9299 is used in usual residence and similarly worded coding when the data relates to overseas.

Example:

S/T	SD	SSD	SLA
3	88	88	9299 Overseas, Queensland

- Code 9399 is used as a dummy LGA to enable S/T totals to be produced for some LGA output from the Censuses of Population and Housing. In such circumstances, code 9399 equates to the aggregated unincorporated SLAs in each S/T.

Example:

S/T	LGA
7	9399 Aggregation of unincorporated SLAs, Northern Territory

- Code 9499 is used for persons with no fixed place of abode, including children in care, persons in prison etc.

Example:

S/T	SD	SSD	SLA
4	88	88	9499 No fixed abode, South Australia

Special purpose SD and SSD codes

The two-digit code 88 is reserved for coding undefined area data to SSD and SD levels. A dummy SD, with an SD code of 88, exists for every S/T in the Main Structure, except Other Territories. Similarly there is a dummy SSD for every SD, except for Other Territories.

Example:

S/T	SD	SSD
1		New South Wales
	88	New South Wales Undefined
	05	Sydney
	88	Sydney Undefined

Special purpose S/T code

Data are coded to Undefined S/T when address details specify Australia only (i.e. without S/T details). The S/T code for Undefined S/T is 0. This code is also used to code Population Census data when usual residence is not stated.

Example:

S/T	SD	SSD	SLA
0	88	88	9099 Undefined S/T or for Population Census purposes— Not stated

Statistical Region structure

Contents >> Chapter 8. Special purpose ASGC codes >> Statistical Region structure

In the SR Structure, special purpose codes relate to SLAs, SRs and S/Ts.

Special purpose SLA codes

See chapter 8. Special purpose SLA codes

Special purpose SR codes

In New South Wales, Victoria, Queensland, South Australia and Western Australia, the two-digit code 98 is reserved for coding undefined area data to the SR level.

Example:

S/T	SR	SLA	
5	98	9899	Undefined Western Australia

In the remaining S/Ts (Tasmania, Northern Territory, Australian Capital Territory, Other Territories) there is only one SR, so undefined SR level data is coded to an undefined SLA within each S/T's one defined SR (code 04).

Example:

S/T	SR	SLA	
8	04	9899	Undefined Australian Capital Territory

Special purpose S/T code

See Special purpose S/T code (Main Structure).

Chapter 9. Use of the ASGC in publication of ABS statistics

Contents >> Chapter 9. Use of the ASGC in publication of ABS statistics

The ASGC was created to allow spatially comparable statistics to be collected and published by the ABS. However, this objective can only be achieved if the ASGC is consistently applied across all statistical work. The following publishing guidelines are therefore used in the ABS:

- Where possible, each table relates to one particular ASGC structure only. This structure is identified in the table heading or a table footnote.
- Where possible, the ASGC structure is represented in full. Omissions of one or more hierarchical levels in one structure are however, permissible. For example, the entire CD level or entire SSD level of the Main Structure may be omitted. All omissions are noted and explained in the publication.
- Partial omissions from an ASGC structure may also be necessary because of confidentiality considerations. When ASGC spatial units have to be combined, the combinations are confined to spatial units which are:
 - within one ASGC structure;
 - at the same hierarchical level; and
 - within one spatial unit at the next hierarchical level.

Example:

in the Main Structure, two or more SLAs within an SSD
or, two or more SSDs within an SD.

- In certain circumstances it is permissible in one table, to publish statistics which relate to more than one ASGC structure, for example, if statistics are required on LGAs and SDs. Extreme care is required, however, to ensure the statistics being cross-classified cover the same total area. For example, in some States and the Northern Territory, LGAs cover only part of the S/T, while SDs cover the entire S/T. A cross-classification of LGAs within SDs would therefore not be feasible if S/T totals were required. In this case, use of the Main Structure or the SR Structure would be more appropriate.
- ASGC spatial unit names are shown in table stubs or column headings. These should conform with those in the ASGC or authorised ASGC subsets.
- Each file, document or publication containing statistics classified according to the ASGC specifies the applicable ASGC edition. This is necessary to ensure users can compare like areas across different collections.
- Care should be taken in publishing ASGC spatial unit codes. In publications containing combined national, S/T data, ASGC spatial unit codes are quoted in conjunction with spatial unit names or prefixed by S/T codes to allow unique identification throughout Australia.

Contact details

For further information about these publication guidelines please contact the Assistant Director, Area Classification, Australian Bureau of Statistics, Canberra on telephone 02 6252 5888 or email to geography@abs.gov.au.

[Next Page](#)

Chapter 10. Maintenance of the ASGC

The first edition of the ASGC had an effective date of 5 July 1984 and adopted the geographical areas already in use in the ABS for some time prior to that date. In 1988, the ASGC underwent a review and most of the findings were incorporated into the 1991 edition of the ASGC. A further review of the ASGC commenced in early 1996 and was completed in 1997. This review did not result in any changes to the ASGC spatial units or their delimitation criteria. However a decision was made to review the existing capital city SDs, and S Dists, to ensure they will meet statistical requirements for at least the next twenty years. Sections of State are also being reviewed to determine additional classes for the urban centres. The outcomes of these reviews will be implemented in the ASGC 2001 Edition.

Prior to 1993, the ASGC was updated on an as-needed basis which generally resulted in updates occurring once or twice a year. Since 1994, the ASGC has been updated annually (with the exception of 1997, in which no update occurred) with an effective date of 1 July. The nine editions of the ASGC manual between 1984 and 1990 were known as Edition 1 to Edition 9. By contrast, the five editions between 1991 and 1995 were known as Edition 2.1 to Edition 2.5. From 1996, the ASGC edition is known by the year it becomes effective, e.g. the 1999 Edition.

Earlier editions of the ASGC manual were kept up-to-date by the issue of replacement pages. Editions 1 to 9 formed one series of editions. Similarly, Edition 2.1 was the base edition for the second series of ASGC manuals, which included Editions 2.1 to 2.5. The 1996 Edition was published as part of a three-volume set of Statistical Geography publications relating to the 1996 Census. The 1998 and 1999 Editions are each published as a single volume.

Spatial unit and code changes

Essentially, the ASGC is updated in response to two types of changes:

- Externally controlled spatial unit changes. These changes relate to administrative or political areas which have been adopted as spatial units in the ASGC. The ABS has no control over changes to these types of spatial units. The most usual changes of this type are changes to LGAs made by State and Territory Governments. These changes can range from LGA boundary variations to the creation or amalgamation of whole LGAs and usually require consequential changes to related ASGC spatial units such as SLAs.
- All other changes. These cover changes to ABS-defined spatial units, such as SLAs created within LGAs or changes to SSD boundaries, or changes to the principles and criteria which govern the delimitation of these spatial units. On occasion, changes of this type are triggered by changes to administrative or political areas described above. More usually, changes of this type result from ad hoc or systematic reviews.

Changes in spatial units are often, though not always, accompanied by changes to the spatial unit codes. Therefore it is important when referencing spatial units in publications or tabulations, to quote the ASGC edition as well as the names and codes of these units. The main causes of spatial unit code changes between ASGC editions are:

- changes to spatial unit areas, especially where changes are significant;
- spatial unit name changes, especially in the case of LGAs and SLAs;
- consequential changes i.e. where one change forces another; and
- general code structure revisions.

Coordination of ASGC maintenance

Maintenance of the ASGC and ASGC-related material and products is shared by a number of projects within the ABS Central and State Offices. It is coordinated by Geography Section which also has responsibility for the ASGC manual and the National Localities Index (chapter 11), as well as providing assistance to users.

[Previous Page](#)

[Next Page](#)

Chapter 11. ASGC-related material and products

[Contents >> Chapter 11. ASGC-related material and products](#)

The ASGC manual is essentially a reference document. Consequently, additional and more specialised ASGC-related material and products are needed to assist application of the ASGC to statistical work. Many of these materials and products are available for sale to ABS clients, as well as for use by ABS personnel. The following is a listing of some of the more important types of related material and products.

National Localities Index (NLI)

The NLI (cat. no. 1252.0) is a street address coding system which supplements the ASGC. The NLI allows reported street address data to be readily converted into ASGC codes. The NLI contains a list of all localities in Australia. In broad terms, localities are places where people reside or conduct business. Localities are assigned a postcode and their full ASGC Main Structure code (i.e. S/T, SD, SSD and SLA codes). Where a locality is split between two or more SLAs, the NLI is augmented by a streets index. The NLI is updated regularly and maintained in accordance with each edition of the ASGC.

The NLI is held and maintained on the ABS mainframe computer system and is available on various recording media (e.g. magnetic tape or floppy disk) as either simple data files or incorporated into computer-assisted coding software. The NLI is available by S/T or for the whole of Australia.

Maps and digital boundaries

Maps depicting the census editions of the ASGC were included in 1986 and 1991 Census publications, and for the 1996 Census in Statistical Geography: Volume 1—Australian Standard Geographical Classification (ASGC) (cat. no. 1216.0). Since 1991, copies of digitised ASGC boundaries have been produced and are available for each edition of the ASGC. Digitised boundaries for the 1986 Census (ASGC Ed. 3) are also available.

ASGC maps of the 1999 Main Structure are included in this publication. Printed A3 size maps for the Main Structure of ASGC Editions 1991-1998 (cat. no. 1216.0.05.001) are available through ABS Bookshops.

Labels and codes

Listings of ASGC labels and codes are available for all structures and all editions of the ASGC (cat. no. 1216.0.15.001). These listings are available on floppy disk. The standard format is ASCII comma delimited text file.

Conversion listings and concordances

To assist users of the ASGC, the ABS (Geography Section) has developed a number of conversion listings (concordance files) to enhance comparability of data. These concordances are available on floppy disk in a variety of storage formats. The standard format is ASCII comma delimited text file. Concordance files are available by S/T or for the whole of Australia.

The concordances currently available include:

- 1998 SLAs to 1999 SLAs
- 1996 SLAs to 1998 SLAs
- 1996 CDs to 1999 SLAs
- 1996 CDs to 1998 SLAs
- 1996 CDs to 1996 SLAs
- Census 91 SLA Codes/Census 96 SLA Codes
A concordance incorporating all area/code changes to SLAs between the 1991 and 1996 Censuses of Population and Housing.
- Census 86 SLA Codes/Census 91 SLA Codes
A concordance incorporating all area/code changes to SLAs between the 1986 and 1991 Censuses of Population and Housing.
- Postal Area to ASGC Edition 1996 Concordance
Concordance files for converting postal area (CD-derived postcodes) data to and from the ASGC 1996 Edition.
- Customised Concordances
Concordances between ASGC spatial units, postal areas and other geographical units can be tailored to individual user requirements.

Appendix 3. Changes to Geographical Areas 1996-1999

[Contents >> Appendix 3. Changes to Geographical Areas 1996-1999](#)

This file contains a printable copy of pages 189 to 210 of the paper publication. This appendix contains details of all changes to Statistical Divisions, Statistical Subdivisions, Statistical Local Areas and Statistical Districts between ASGC Editions 1996 and 1999. Significant changes between ASGC Editions 1998 and 1999 are also listed in Appendix 4.

Appendix 4. Significant changes between ASGC Editions 1998 and 1999

[Contents >> Appendix 4. Significant changes between ASGC Editions 1998 and 1999](#)

This file contains a printable copy of pages 212 to 215 (Appendix 4 tables) of the 1999 edition paper publication.

All statistically significant changes are listed, including changes in ASGC code numbers only. Some minor spatial unit changes that involve no changes in ASGC spatial unit codes are not included in this Appendix. These include spatial unit boundary changes which involve no significant transfers of households or economic units from one spatial unit to another. Changes of this type are listed in Appendix 3 of this ASGC edition.

Spatial unit splits/ amalgamations are indicated by 'link' lines in the table of changes.
